Curriculum Vitae

Personal Information:

- **Nombre Completo: Sebastian Alberto Perez**
- **DNI: 35417822**
- **Ubicación: Argentina, Buenos Aires, Berazategui**
- **Time Zone: UTC-3**
- **Teléfono: +54 11 32830604**
- **Correo: sebastian.perez.jobs@gmail.com**
- **Linkedin: https://www.linkedin.com/in/sebaperez90**
- **Github: https://github.com/SebaPerez90**
- **Portfolio:**

About me:

Well, to delve deeper into my current job and education status, I want to emphasize that I am actively seeking employment. At this point, I want to pause for a moment and highlight that my main goal is to enter the IT field. I have the technical skills to start tackling real projects, and on a personal, human level, I have skills acquired from my previous work experience (which I will detail later) that allow me to integrate into any work team and adapt to different work environments.

Regarding my education, I began my training more than two years ago. I had a stint with various experiences, both formal and informal. The first was the "Soy Henry" bootcamp, which I decided to abandon because I didn't have the necessary knowledge at that time. Then I enrolled in the "UTN" (National Technological University) which I couldn't continue due to economic reasons. Currently, I have resumed the "Soy Henry" bootcamp, which offers a program with a stack that I already master. But my goal is to take advantage of the contacts I can make during the course and also the support of an official educational institution.

Finally, I would like to highlight that during this time and currently, I continue to self-educate. I feel that I have a lot to contribute to any company, and if I don't, I have the determination and commitment to rise to any challenge.

Skills:

- **Front-end: Javacript | React.js | CSS | HTML | Sass | Tailwind | Typescript**
- **Backend: Node.js | Express.js | MoongoDB | SQLite | Jest | Next.js**
- **Adicionales: Git | Github | Ingles**

*** *Additionally, I didn't mention my passion for the English language, but I have the same commitment and motivation for learning it. Through apps, various input methods such as podcasts, fully English devices, consuming documentation in English, documenting my own projects in English, and recreationally watching series/movies in English to immerse myself constantly in the language.*** *

Experience:

As for my work experience, I decided to leave it until the end because it's from a completely different area than the IT industry. I worked for over 11 years in gastronomy, specifically as a waiter. At the time, when studying programming wasn't in my plans and my commitment to my job was total, I managed to work in top-level companies because I set it as a goal for myself. I have the same determination now but with the IT sector. If required, I can elaborate more on my past gastronomic experience.
